***PRESS STATEMENT***

We have been notified that, due to a malfunction in the natural gas transmission system on the Iranian side, the natural gas deliveries to Turkey on Gürbulak-Ağrı entry point will be stopped for 10 days as from January 20, 2022.

All the necessary applications have been made before the Iranian counterparts for remedying of the malfunction within a shorter time and the issue is being followed closely.

On the other hand, in order to maintain the electricity and natural gas system balance, restrictions will be made to the natural gas deliveries, provided that they remain limited to the industrial facilities with high consumption and power plants, and on the condition that aforementioned customers will be notified of the outage plans in advance.

All the required measures have been taken in order to prevent the rest of the customers from being affected by the restrictions, despite the adverse weather conditions that are below seasonal normals.

Respectfully announced to the public.
